

Software Dependability

Project Evaluation Criteria

	Result	Notes
The application is buildable in CI/CD and locally.		
The core methods of the application have a formal specification in JML, verified using OpenJML.		
A Docker image for the application ready to be orchestrated is available in DockerHub.		
The application has a significant number of test cases.		
Code coverage is analyzed using Jacoco.		
A mutation testing campaign is conducted to analyze the test cases using PiTest.		
JMH microbenchmarks test the performance of the most demanding components.		
Security mechanisms are implemented in CI/CD.		
Security is analyzed using GitGuardian, Snyk, and Sonarqube.		
The web application shows no vulnerabilities.
